

*For immediate release:
February 9, 2015*

GMI employees engage in a Stretch and Flex Program prior to beginning work each day. Within the Commercial Construction Industry, soft tissue related injuries are a common occurrence (e.g. muscle strains). Studies have been conducted and conclude that when employees warm up prior to work, through programs such as Stretch and Flex, the soft tissue injuries are greatly reduced. This in turn makes for much more productive employees who feel good when they day is over.
